

MOHAMMAD MALEKSHAAHI

Backend Developer

Ahvaz, Iran | github.com/malekShaahi | Telegram: @M0hdev | 09168216275 | fotility.ir

PROFESSIONAL SUMMARY

Backend developer focused on building real-time, event-driven services with Node.js, Express and Socket.IO. Experienced in designing REST APIs, modeling data with MongoDB and PostgreSQL, and keeping servers fast and reliable under live traffic. Comfortable owning a product end-to-end — from schema design through deployment with Docker and Git.

SKILLS

Programming Languages: JavaScript, SQL

Frameworks: Node.js, Express.js, Mongoose, Socket.IO

Databases & Tools: MongoDB, PostgreSQL, Redis, Git, Docker

Key Concepts: REST API design, software design principles, version control, testing

Technical Responsibilities: error handling, server performance optimization and efficiency

PROJECTS

Fotility

fotility.ir | Node.js · Express · Socket.IO · MongoDB

- Football information and interactive platform built with Node.js, Express and Socket.IO, featuring real-time communication with a reference API.
- Implemented binary storage for images and files, plus voice-based identification and text-message processing capabilities.
- Kept player and team data always up to date through a mix of periodic cron jobs and event-driven updates synced to the frontend over WebSocket.
- Focused on server performance optimization and reducing request response time.
